Assessment of AVS Steps Limited

Steps model range K 600..

Testing took place on 20-23rd May 2003 to establish compliance with current European Legislation.

These steps were tested using a hydraulic ram to generate a load of 250kg at the centre of the step. The maximum deflection was 8mm at the centre of the step.

The steps withstood 26,453 cycles before failure occurred under these criteria.

In our opinion these steps surpass the requirements as laid down by European Legislation 72/245/EWG and the Bus and Coach directive 2001/85/EG and 72/245/EWG

A hard copy certification will be provided as soon as possible:

Dr. Peter Darkins  
Industrial Liaison Manager  
Harper Adams University College

Peter Darkins

Harper Adams University College, Newport, Shropshire, TF10 8NB UK
