

AVS FITTING SUGGESTION.

MERCEDES 609

A fitting kit has not been manufactured by AVS for this vehicle because of limited demand.

The picture above shows a step fitted by a coachbuilder.

The step is a A450C (KE450BZ)

The main problem is that the spring hanger has to be avoided. This is done by bringing the step out and down to avoid it. The dropper plate at the front does this.

We suggest using universal mounting struts at the rear to mount the step to the chassis. These will mount in the rear of the step case which has pre-fitted M8 fittings.
